

PASINDU BALASURIYA

Software Engineer | Full-Stack Development · React · Node.js · Express · MongoDB · REST APIs

Horana, Sri Lanka · +94 71 631 4505 · pasindubhasurabala@gmail.com · LinkedIn: [pasindu-balasuriya](#) · GitHub: [pasindu2001-SW](#) · Portfolio: [pasindu-portfolio.vercel.app](#)

SUMMARY

Software Engineering undergraduate with hands-on experience gained through a six-month full-stack internship, I contributed to real-world software development through coding, testing, deployment, and bug fixing. I mainly worked on frontend development while also gaining practical experience with backend development and API integration. I enjoy following software engineering best practices, collaborating with team members, learning new technologies, and using AI-driven development tools to work faster and smarter. A fast learner who adapts quickly to new technologies and is passionate about building clean, reliable, user-focused software.

TECHNICAL SKILLS

FRONTEND DEVELOPMENT	React.js, Redux Toolkit, Material UI, JavaScript (ES6+), HTML, CSS
BACKEND DEVELOPMENT	Node.js, Express.js, Fastify, REST APIs
DATABASES & PERSISTENCE	MongoDB, Prisma ORM
PAYMENTS & INTEGRATIONS	Stripe, PayHere, Stream Chat, OneSignal, Firebase, AWS S3, Mixpanel
AI / ML	Python, OpenCV
MOBILE	Flutter
TOOLS & PLATFORMS	Git, GitHub, GitHub Actions, Postman, Jira, npm, Chrome DevTools

EXPERIENCE

Fullstack Software Engineer Intern

Mar 2026 – Sep 2026

Techserw Labs (branded as Code3x) · Colombo, Sri Lanka · Full-Time · Remote

Project: [Rentzee – Multi-Tenant Vehicle Rental Platform](#)

- Ranked #2 contributor across both the customer web app and the admin dashboard, with 278+ commits.
- Built and improved the vehicle listing flow, including a multi-step "List Your Vehicle" wizard, camera-based document upload (license, NIC, insurance), and drag-and-drop image reordering.
- Built the interactive map and search feature using Apple MapKit and Google Maps, with filters for transmission type, seat count, price range, and vehicle model.
- Built the vehicle availability calendar using FullCalendar, and the customer chat and video call system using Stream Chat and Stream Video.
- Connected Stripe and PayHere payment gateways, and built a multi-currency system that supports LKR, USD, and other currencies with live conversion rates.
- Added OneSignal push notifications and Mixpanel event tracking to monitor user actions and button clicks across the platform.
- Deployed frontend builds through the team's CI/CD pipeline on GitHub Actions.
- Fixed 40+ bugs across four bug epics, including a price calculation error, a calendar colour clash, and a CSV export data leak.
- Learned and applied backend fundamentals using Node.js, Fastify, and Prisma ORM, including investigating and fixing a backend bug related to promotion status.
- Worked with Git and GitHub through feature branches, pull requests, and code review, and followed Agile Scrum practices with daily stand-ups, sprint planning, and retrospectives.

Key Impact: #2 contributor across two repositories (278+ commits) · Built vehicle onboarding, map search, booking calendar, chat & payments · Deployed through CI/CD · Fixed 40+ production bugs

STACK : React · Redux Toolkit · Material UI · Stripe · PayHere · Stream Chat & Video · OneSignal · Firebase · AWS S3 · Mixpanel · FullCalendar · Git · GitHub · GitHub Actions · Jira

PROJECTS

Product Store — MERN Stack

Built a full-stack product management application using React.js, Node.js, Express.js, MongoDB, and Chakra UI. Developed REST APIs for managing products and created a responsive user interface with dark/light mode and error handling.

STACK: React.js · Node.js · Express.js · MongoDB · Chakra UI · REST APIs

Netflix Clone — React.js, Firebase, TMDB API

Built a responsive Netflix-style UI with real-time movie categories from the TMDB API, Firebase authentication, and Firestore. Added YouTube trailer playback and reusable, optimised UI components.

STACK: React.js · Firebase · Firestore · TMDB API

PredictiveHR — HR Churn Prediction System (Group Project)

Built an employee churn prediction platform with a React and Tailwind dashboard, a FastAPI backend, and a PostgreSQL database. Used a logistic regression model to predict resignation probability based on job role, distance from home, remote status, promotions, and income.

STACK: React · Tailwind CSS · FastAPI · PostgreSQL · Python

To-Do App — Express.js, MongoDB, EJS

Built a task management web application using Express.js, MongoDB, and EJS. Implemented CRUD functionality for creating, viewing, updating, and deleting tasks, with server-side rendering using EJS.

STACK: Express.js · MongoDB · EJS

Real-Time Sinhala Sign Language Recognition — AI / Computer Vision (FYP, Group Project)

Led the AI development for a real-time Sinhala sign-language recognition system. Prepared the dataset, performed MediaPipe landmark extraction, and trained an LSTM deep-learning model for gesture classification. Built and deployed a Flask REST API for real-time predictions and integrated it with the Flutter frontend. (Avatar system and full app UI were developed by other team members.)

STACK: Python · MediaPipe · LSTM · Flask · Flutter

EDUCATION

BSc (Hons) in Software Engineering

Mar 2022 – Present (Expected 2026)

SLTC Research University

- Concentration: Full-Stack Development and Artificial Intelligence.
- Related Coursework: Data Structures and Algorithms, Web Application Development, Software Engineering, Machine Learning, Artificial Intelligence, Deep Learning, Cloud Computing, Software Architecture, Project Management, Discrete Mathematics.

A/L (Advanced Level) — Technology Stream

2020

Remuna Maha Vidyalaya

O/L (Ordinary Level)

2017

Ashoka College, English Medium School

CERTIFICATIONS & COURSES

MERN Stack: All You Need to Know with Practical Project

Dec 2025

Udemy

- Covered MongoDB, Express.js, React, Node.js, REST APIs, and Authentication.
- <https://ude.my/UC-b3a99245-fc77-4539-8f31-9eea6353c61f>

LANGUAGES

- English: Fluent
- Sinhala: Native
